CURRENT RESEARCH IN CANADIAN URBAN HISTORY

RECHERCHES RECENTES EN HISTOIRE URBAINE CANADIENNE

Gilbert A. Stelter

Judging by the amount of research activity in progress, urban history is thriving in Canada. This second survey lists 306 individuals and their projects, a number which represents considerable growth from the 130 included in a similar list in this journal four years ago.* The list is probably still far from complete, but it is an indication of who is working in the field, what type of topic is being examined and where the work is taking place. Many of those included here would not consider themselves "urban historians" in any exclusive sense, but their work explicitly or implicitly relates to the historical development of particular cities or to the broader aspects of the urban past.

Most of the research work continues to be done at universities, with more than half (166) involving graduate degrees. A significant amount of research is now being done by government agencies such as Parks Canada (27), but this aspect of the list is particularly incomplete. Whether government cutbacks will seriously curtail this development is still not clear. In terms of disciplines, those listing themselves as historians continue to dominate (190), with geographers (62) the most numerous group in the social sciences. A major new area of interest is architecture (31)

A en juger par le volume des recherches en cours, l'histoire urbaine est florissante au Canada. Dans cette deuxième enquête sont énumérés 306 particuliers et leurs projets, ce qui représente une augmentation importante par rapport au 130 cités dans une liste semblable, publiée dans la revue il y a quatre ans.* La liste est probablement encore incomplète, mais elle nous donne une idée de qui travaille dans le domaine, des sujets étudiés et des endroits où se déroulent les travaux. Nombreux parmi ceux cités sur la liste ne se considéreraient pas comme des "historiens urbanistes" dans un sens exclusif, mais leurs travaux se rapportent implicitement ou explicitement à l'évolution historique de centres urbains particuliers ou à des aspects plus vastes du passé des villes.

La plus grande partie du travail de recherche se fait toujours dans les universités car sur le total, plus de la moitié des recherches (166) s'est effectuée au niveau du baccalauréat. Un volume important de recherche est effectué par des organismes gouvernementaux tels Parcs Canada (27), mais la liste est particulièrement incomplète à ce sujet. Nous ne savons toujours pas si les restrictions budgétaires du gouvernement vont freiner cet essor. Quant aux disciplines, ceux qui se déclarent historiens continuent à dominer (190) et les géographes (62) sont les plus nombreux au sein du groupe des sciences sociales. L'architecture (31) est un nouveau domaine d'intérêt important alors que

*See/voir, *Urban History Review/Revue d'histoire urbaine*, No. 3-75 (February/fevrier, 1976), pp. 27-36.

while planning remains relatively poorly represented (8). It should be pointed out, however, that a good deal of architectural and planning history is done by those whose academic affiliation is either history or geography. As was the case four years ago, economists and sociologists are still not heavily committed to research on the urban past.

Almost half (144) of those listed are located in Ontario, but the former concentration of urban historians in this region has been diminished considerably. The most notable development in this regard is the growth of research activity in Quebec (62) and the strong showing of the West (64), while growth is not as evident in Atlantic Canada (34). Much of the new activity appears to stem from graduate work at the smaller, newer universities such as Memorial, Quebec at Montreal, Sherbrooke, Guelph, Regina and Victoria. A concomitant development is an increase in the local nature of urban history, perhaps representing the growing regionalization of the country. Only thirty-two researchers are working on regions other than that in which they reside; most of these are graduate students in Ontario who work on places in the Maritimes and Quebec.

The sharp growth of interest by Quebec historians in their own cities is shown by the numbers who are examining aspects of Montreal's history (34), Quebec City (18) and Sherbrooke (4). In Ontario most of the research is directed to Toronto's past (30), followed at a distance by Hamilton (8). In the West, Winnipeg and Vancouver are listed nine and eight times respectively; Regina is now up to seven. Saint John (11) is the most popular urban research area in the

l'urbanisme demeure relativement peu représenté (8). Il faut toutefois signaler qu'une bonne partie de l'histoire de l'architecture et de l'urbanisme est écrite par ceux qui ont étudié en histoire ou en géographie. Comme ce fut le cas il y a quatre ans, les économistes et les sociologues ne se sont pas encore engagés dans la recherche sur l'histoire urbaine.

Presque la moitié (144) de ceux énumérés demeurent en Ontario, mais la concentration d'historiens urbanistes dans cette région a beaucoup diminué. A cet égard, on note un accroissement remarquable de la recherche au Québec (62), la représentation importante de l'Ouest (64) alors que l'essor est moyen dans la région de l'Atlantique (34). Il semble qu'une bonne partie des nouvelles recherches se fassent au niveau du baccalauréat dans des universités nouvelles et plus petites, notamment à l'Université Memorial, du Québec à Montréal, de Sherbrooke, de Guelph, de Regina et de Victoria. On note parallèlement une augmentation de l'aspect local de l'histoire urbaine, indice probable de la régionalisation croissante du Canada. Seulement trente-deux chercheurs travaillent sur des régions autres que celle où ils demeurent: la plupart d'entre eux sont des diplômés universitaires de l'Ontario qui étudient des centres urbains des Maritimes et du Québec.

L'intérêt croissant dont font preuve les historiens québécois à l'égard de leurs propres villes est souligné par le nombre de ceux qui étudient les aspects de l'histoire de Montréal (34), de la ville de Québec (18) et de Sherbrooke (4). En Ontario, la recherche touche surtout le passé de Toronto (30),

Maritimes, followed by Halifax (9). In each region there seems to be a new interest in the medium-sized community, which is a welcome departure from the previous concentration on only the largest places.

What might loosely be termed "social" history represents the largest category in terms of emphasis (107); this includes everything from institutions such as schools, churches and unions in an urban setting, to systematic analyses of society. Correlating social characteristics and the spatial dimension - that is, putting people on the map - is increasingly of interest to geographers. Those interested in the physical aspects of urban development (70) tend to emphasize architecture although housing remains a curiously neglected subject particularly in the sense that it could be an important element of the city-building process. Those working on economic growth (56) have turned to a city's regional orientation or to systems and networks. The study of government and politics (51) continues to concentrate on the reform period of the late 19th and early 20th centuries. The tendency to deal with the 1870-1920 period is true of all areas, although there is now more work being done on the post-1920 period. The pre-Confederation and the 17th and 18th centuries continue to be neglected.

If any central theme runs through the diversity of research topics it is probably the question of power. This may not always be apparent from the bare and often sparsely worded listings, but it is an impression I get from discussing many of these projects with the individuals concerned. Power in

suivie d'assez loin par Hamilton (8). Dans l'Ouest, les villes de Winnipeg et Vancouver ont été respectivement citées huit et neuf fois, Regina est maintenant mentionnée sept fois, alors que dans les Maritimes, c'est la ville de Saint-Jean (11 fois) qui est la plus étudiée, suivie de Halifax (9). Dans chaque région, l'agglomération moyenne semble avoir suscité un nouvel intérêt, orientation bien accueillie compte tenu de la concentration précédente sur les grandes villes.

Ce qu'on peut plus ou moins qualifier d'histoire "sociale" reçoit le plus d'attention (107); cette appellation comprend tout, des établissements tels les écoles, les églises et les syndicats dans un milieu urbain aux analyses systématiques de la société. Les caractéristiques sociales correspondantes et la dimension spatiale, - ce qui veut dire "mettre des gens sur la carte" - intéressent de plus en plus les géographes. Ceux qui s'intéressent aux aspects physiques de l'aménagement urbain (70) tendent à insister sur l'architecture, mais l'habitation demeure un sujet curieusement négligé, surtout si l'on considère qu'elle pourrait constituer un élément important de la construction des villes. Ceux qui travaillent sur la croissance économique (56) ont opté pour l'orientation régionale de la ville ou les systèmes et réseaux. L'étude du gouvernement et de la politique (51) continue à se concentrer sur la période de réforme de la fin du XIX^e siècle et du début du XX^e. Dans tous les domaines, il y a une tendance à étudier la période allant de 1870 à 1920, mais nous avons actuellement un plus grand volume de travail sur la période postérieure aux années 20. La période précédant la

this sense involves social and community relationships at several levels, including metropolis-hinterland arrangements, class differentiation, and changes in the nature and role of several levels of government. One of our long term tasks - one that can provide a good deal of direction to the field of urban history - is to describe and analyse the decision-making process of individuals and groups in terms of control and the spatial distribution of power.

Confédération et les XVII^e et XVIII^e siècles continuent à être négligés.

Si un thème central ressort de la diversité des sujets de recherche, c'est probablement la question du pouvoir. Cette constatation n'est peut-être pas toujours apparente dans les résumés simples et souvent très succints mais c'est une impression que je retire des discussions engagées sur de nombreux sujets en cause avec les chercheurs. Le pouvoir en ce sens touche les relations communautaires et sociales à plusieurs niveaux, y compris les accords entre la métropole et l'arrière-pays, la différenciation des classes et les changements apportés à la nature et au rôle de plusieurs paliers du gouvernement. L'une de nos tâches à long terme - qui pourra d'ailleurs appliquer une forte orientation au domaine de l'histoire urbaine - est de décrire et d'analyser le processus de prise de décision des particuliers et des groupes quant au contrôle et à la répartition spatiale du pouvoir.
