This digital painting is my approach to learning. There are still many things we are unable to explain about the human mind. Our neurons are constantly making new connections within our brains, allowing us to learn and grow. And just as our brains are made of neural assemblies, our lives are a bigger, more tangible, representation of complex webbed linkages. We spend our lives building new connections through human interactions, which allow us to grow socially, emotionally and professionally by providing new perspectives. As stated above, there is a lot we don’t know about the brain, and a lot of the time I find myself wishing I could actually see and touch an active neuron, hoping to further understand how new neural linkages affect consciousness, imagination, and learning.
