The Distribution of NSERC Funds: 1986-87

From a Grantee *

* Author's identity withheld upon request

Last year in *Geoscience Canada* (Anon, 1986), I published an analysis of the distribution of NSERC operating funds. I argued that despite obvious limitations, this is a fairly reliable way of comparing departments, because most workers rely on NSERC for the major part of their research funding. The data are publically available in the volume published by NSERC (1987). Here I present a similar analysis for the year 1986-87.

Table 1 shows the average Operating Grant (total \$\$ divided by number of recipients) given to all Universities by Committee 10 (Earth Sciences). This committee covers geology, geophysics, geography, oceanography, as well as a small number of grants given to workers in departments such as biology, zoology, mathematics, etc. To make comparisons within the core of Geology and Geophysics (hereafter the "GG Core"), I recalculated the figures (Table 2) excluding grants made to faculty outside the GG Core (i.e., excluding geography, oceanography, etc.), and excluding supplements made to University Research Fellows. About 73.1% of Committee 10's money is given within the GG core. The GG Core includes the Geophysics Departments at York and Western Ontario, and people identified as working in geophysics (despite assignments to various departments) at UBC, Alberta and Toronto.

As a further comparison, to identify granting levels on a *Departmental* basis rather than an individual basis, I divided the total \$\$ not by the number of grantees, but by the total number of faculty in each GG core department (Table 3). The faculty numbers were derived from the AGI Directory of Geology Departments (1986), and include only faculty listed under the titles of Professor, Associate Professor, Assistant Professor or "on leave". I did not include Emeritus Professors, adjuncts, lecturers, research assistants, etc. Exact head counts were difficult in some cases (and were not attempted for "Land Resource Science" at Guelph). York University also disappears from Table 3 because it is not listed in the AGI Directory.

The mean value of the grant is almost the same in Tables 1 and 2; \$22,688 (1985 - \$22,864) for all departments and \$23,669 (1985 - 23,553) for the GG Core. Note that average grants were essentially the same as last year.

Comparisons of Tables 1, 2 and 3 between 1985 and 1986 show some shuffling of departmental positions, probably largely due to movements of senior faculty, and partly due to retirements of senior faculty and their replacement by more junior (fewer \$\$) faculty. In Table 1, Laurentian, New Brunswick and Waterloo move into the top 10 in 1986, at the expense of Dalhousie, Memorial and U. de Montréal (departments listed alphabetically). Laurentian's position is based upon only one grant, and the overall depart-

ment placing is better seen in Table 3. In Table 2, Laurentian and York join the top 10, displacing Guelph and U. de Montréal from last year. In Table 3, the top 10 departments of 1985 are also the top 10 for 1986, although there are minor changes in the order.

* Number of Faculty counted in the 1986 AGI Directory of Geology Departments, and includes only Professors, Associate Professors, Assistant Professors and faculty listed as "on leave".

Guelph is not listed because of the difficulty of counting GG Core Faculty in the Department of Land Resource Science.

York is not listed because the number of faculty in the GG Core is not given in the AGI Directory.
