2 Curvy Girls Scoliosis Support Group, Toronto, Ontario, Canada

**Keywords:** Scoliosis, Peer Support, Teenage Girls

**CONTEXT:** Scoliosis is an abnormal lateral curvature of the spinal column and affects approximately 1% to 3% of adolescents. The relationship between pain and idiopathic scoliosis has not been well documented and remains unclear in the literature. Curvy Girls is an international peer-run support group that aims to reduce scoliosis's emotional impact through education, mutual support, and self-empowerment.

**OBJECTIVES:** This study endeavors (1) to gain insight into the lived experience of teenage girls living with scoliosis and (2) to understand how the peer support group, Curvy Girls, has impacted their lives.

**APPROACH:** We interviewed sixteen members of Curvy Girls living with scoliosis. The interviews were transcribed verbatim, and then interpreted using applied philosophical hermeneutics.

## **FINDINGS:**

I. Personal Lens: The narratives of living with undiagnosed pain revealed confusion, solitude, and loneliness. The impact of labeling the pain (i.e., an official diagnosis) led to relief in some cases or irritation in some other cases.

II. Healthcare Lens: The stories of negative healthcare experiences and their impact on teenage girls are uncovered. The teenage girls wanted to be included in treatment decisions that may endorse autonomy and independence during adolescence.

III. Peer support Lens: Curvy Girls provides a safe environment for these adolescent girls to engage. The power of sharing and communicating helps Curvy Girls members cope and feel a sense of belonging.

**SIGNIFICANCE:** An insight into these teenage girls' lived experiences allows for a better understanding of living with scoliosis and how a peer support group can help with this journey. ■
