This paper examines political-economic, cultural, and marketing changes during the 1930s that solidified the domestic tobacco industry and cigarette smoking as a socially normative practice. During this decade, farm production of cigarette tobacco grew exponentially in southern Ontario, as did cigarette manufacturing operations, mostly in Montréal. Cigarette marketing and advertising were prolific, as evidenced by the bevy of premium promotions, gift rebates, sports sponsorships, and athlete and celebrity testimonial advertising. Women, for the first time, were routinely targeted by cigarette advertising, and their entry into the ranks of “legitimate” smokers proved a watershed for tobacco manufacturers. Two specific developments further boosted the long-term viability of the cigarette industry. First, Canada’s dominant tobacco firm, Imperial Tobacco, spent heavily on public relations advertising to overcome public criticism of its cut-throat merchandising practices. Second, menthol and filtered cigarettes first appeared in the 1930s, ads for which reassured smokers worried about sore throats and persistent coughs. Long before the tobacco industry’s massive public relations response in the 1950s to the “cancer scare” (which included the heavy promotion of filtered brands as “safer” cigarettes), Imperial Tobacco, among others, was versed in issue-management public relations and forms of cigarette “health marketing.”
Cigarette Marketing and Smoking Culture in 1930s Canada

DANIEL J. ROBINSON

Abstract

This paper examines political-economic, cultural, and marketing changes during the 1930s that solidified the domestic tobacco industry and cigarette smoking as a socially normative practice. During this decade, farm production of cigarette tobacco grew exponentially in southern Ontario, as did cigarette manufacturing operations, mostly in Montréal. Cigarette marketing and advertising were prolific, as evidenced by the bevy of premium promotions, gift rebates, sports sponsorships, and athlete and celebrity testimonial advertising. Women, for the first time, were routinely targeted by cigarette advertising, and their entry into the ranks of “legitimate” smokers proved a watershed for tobacco manufacturers. Two specific developments further boosted the long-term viability of the cigarette industry. First, Canada’s dominant tobacco firm, Imperial Tobacco, spent heavily on public relations advertising to overcome public criticism of its cut-throat merchandising practices. Second, menthol and filtered cigarettes first appeared in the 1930s, ads for which reassured smokers worried about sore throats and persistent coughs. Long before the tobacco industry’s massive public relations response in the 1950s to the “cancer scare” (which included the heavy promotion of filtered brands as “safer” cigarettes), Imperial Tobacco, among others, was versed in issue-management public relations and forms of cigarette “health marketing.”

Résumé

Le présent article examine les changements politico-économiques, culturels et commerciaux des années 1930 qui ont consolidé l’industrie du tabac au pays et fait du tabagisme une pratique sociale normalisée. Au cours de cette décennie, la culture de tabac à cigarettes s’est accrue de façon exponentielle dans le sud de l’Ontario, au même titre que la fabrication de cigarettes, surtout à Montréal. Le marketing et la publicité de la cigarette battaient leur plein, comme en font foi la multitude de primes,
de rabais, de commandites sportives et de publicités présentant des témoignages d’athlètes et de célébrités. Pour la première fois, les femmes étaient régulièrement ciblées par les publicités de cigarettes, et leur entrée dans le cercle des fumeurs « légitimes » a marqué un tournant pour les fabricants de tabac. Deux nouveautés ont donné du tonus à la viabilité à long terme de l’industrie de la cigarette. Premièrement, la compagnie de tabac dominante au Canada, Imperial Tobacco, a beaucoup investi dans des opérations de relations publiques pour réfuter les critiques du public au sujet de ses pratiques commerciales sauvages. Deuxièmement, les cigarettes au menthol et les cigarettes avec filtre ont fait leur apparition dans les années 1930 et leurs publicités cherchaient à rassurer les fumeurs préoccupés par le mal de gorge et la toux persistante. Bien avant que l’industrie du tabac ne mène de grandes campagnes de relations publiques dans les années 1950 en réaction à la « peur du cancer » (campagnes qui ont notamment beaucoup fait la publicité de marques de cigarettes avec filtre « moins dommageables »), Imperial Tobacco, entre autres, était passée maître dans les opérations de relations publiques stratégiques et le « marketing santé » de la cigarette.

Introduction

In October 1936, mining magnate William Henry Wright bought The Globe, an influential Toronto daily. Soon after, he announced that the paper would repeal its twin publishing bans on horse-race betting odds and cigarette advertisements. “I smoke cigarettes myself,” he stated, and saw no compelling reason to continue the ad ban.¹ A month later Wright purchased The Mail, which he soon merged with his prior acquisition to create The Globe and Mail. Not long after, the newspaper ran ads for British tobacco maker Peter Jackson’s Canadian launch of “du Maurier Filter” cigarettes. These ads promoted the technological advances and health benefits of filtered cigarettes, a novelty in the 1930s. The du Maurier filter trapped “all irritants before they reach your lips,” ensuring a “purer” cigarette, steeped in “mildness” and “pleasing flavour.”² The repeal of a cigarette ad ban and health-themed cigarette promotion highlight two of the many cultural changes and marketing practices during the 1930s
that saw cigarette smoking become a popular, socially normative practice for both men and women.

This was a far cry from the early days of the modern cigarette. Introduced in the 1880s, machine-made cigarettes (and their smokers) were soon after excoriated by social reformers, politicians, and clerics. Fifteen American states passed laws banning the manufacture, sale, or possession of cigarettes before 1922. Canada’s House of Commons passed a motion in 1903 calling for a ban on the sale, production, and importation of cigarettes. Five years later, Parliament voted to prohibit tobacco use by those under sixteen. For decades, the Woman’s Christian Temperance Union campaigned against cigarettes, bemoaning their use as immoral and uncouth, a gateway vice leading to truancy, gambling, drinking, and venereal disease. Before the 1910s, cigarette smokers were characterized as social outcasts: bohemian poets, licentious women, Southern European immigrants. Popular attitudes changed during the Great War, when Ottawa furnished soldiers’ ration kits with cigarettes and countless volunteer drives sent millions more to the troops overseas. Whether as stress relief, appetite suppressant, mental stimulant, or talisman of fellowship, cigarettes helped soldiers cope with the deprivations of trench life and the horrors experienced when “over the top.” Returning soldiers continued to smoke them, transferring their vaunted status as vanquishers of the Kaiser to the former “little white slavers.” By the late 1920s, cigarettes had shed their sordid, demimonde reputation, at least when smoked by men. Increasingly, cigarettes carried favourable associations of male sociability, up-tempo modernity, and middle-class respectability. The “modern man” smoked cigarettes, less so cigars, and seldom a pipe.

While the Great War first “legitimized the cigarette,” a process that continued into the 1920s, I argue here that crucial developments occurred during the 1930s that elevated and solidified the domestic tobacco industry while establishing cigarette smoking as a cultural norm. Per-capita cigarette sales rose every year from 1932 until the late 1940s, with sales between 1932 and 1938 jumping an astounding 78 percent. (In con-
contrast, per-capita cigarette sales declined by 20 percent from 1920 to 1922 and again by 30 percent from 1929 to 1932.10 Farm production of bright-leaf, flue-cured tobacco, the type used for cigarettes, increased exponentially in Canada, rising from 7,570 acres in 1927 to 69,840 in 1939.11 By the late 1930s, Canadian farmers produced nearly all the tobacco needed for cigarette manufacturing in Canada, in contrast to a decade earlier when foreign imports prevailed. Cigarette marketing and advertising were ubiquitous in the 1930s, as evidenced by the many premium and gift rebate campaigns, sports contests, point-of-sale promotions, and athlete and celebrity testimonial advertising. Women, beginning in the late 1920s, became targets of cigarette advertising, whose entry into the ranks of socially legitimate smokers proved a milestone for cigarette makers. Alongside the burgeoning images of women in cigarette ads were the many female stars in Hollywood films lighting up, both on and off the screen. By the late 1930s, cigarette smoking permeated, at times transfigured, forms of social engagement, mass media entertainment, and vernacular expression.

While some of the above-cited factors flowed from changes first set in motion during the Great War, two new developments in the 1930s proved seminal to the longstanding viability of the cigarette industry in mid-century Canada. The country’s largest tobacco firm, Imperial Tobacco Company of Canada (ITC), was pilloried by politicians, citizens, and journalists for restraint-of-trade and price-fixing practices. The landmark report of the Price Spreads and Mass Buying Royal Commission, released in 1935, excoriated ITC for its predatory business practices; if fully implemented, the report’s recommendations would have eclipsed ITC’s dominant share of the cigarette market. The company faced a serious political challenge: how should a large, quasi-monopolistic corporation overcome negative public opinion and convince voters and policy makers that it was in fact socially legitimate, economically productive, and publicly accountable? The firm turned to public relations in the form of a long-running institutional advertising campaign highlighting the firm’s beneficence to its workers, Canadian consumers, and the broader public. This
ad campaign began in 1935 and continued until the early 1940s, long after the crisis precipitating it had subsided. When, two decades later, Imperial Tobacco again embraced public relations professionals and strategies in order to discredit scientific studies aligning cigarettes with lung cancer, it did so with extensive prior experience in this domain.

The second key development during the 1930s concerned the arrival of menthol and filtered cigarette brands. Ads for these appealed to the health anxieties of regular smokers; menthol and filter cigarettes promised to prevent or alleviate coughing, throat irritation, and “tongue bite.” They carried physician endorsements and other forms of medical reassurance. Filters, the ads proclaimed, removed “harmful” irritants and impurities in cigarettes, rendering them “purer” and safer for smokers. While sales of menthol and filtered brands waned during the 1940s, their historical significance in the 1930s concerns the type of marketing discourse they initiated and made familiar to Canadians: “health marketing” calmed the fears of symptom-worried smokers, promising technological solutions for bodily ailments and discomforts associated with regular cigarette smoking. During the 1930s, this involved mostly coughing and soreness in throats and mouths. After 1952, when health marketing resurfaced in response to medical reports linking cigarettes to lung cancer, the health stakes proved much higher, as too would be the sales of filtered brands as smokers again pursued the promise of a “healthier” cigarette.12

Challenging Monopoly Power

The alarmist front-page headline in the Toronto Star (“Canada in Danger of a Dictatorship”) in April 1934 did not reference political events in Europe. It concerned a House of Commons report critical of the Imperial Tobacco Company of Canada (ITC) for its buying practices among Ontario tobacco growers. The company had engaged in “under cover buying” by serving as proxy for its parent company, the Imperial Tobacco Company of Great Britain and Ireland. This dampened prices for tobacco farm-
ers, who were placed at a great “disadvantage in dealing with a company of such bargaining strength.” The story caught the eye of H.H. Stevens, the Minister of Trade and Commerce, who chaired the Committee on Price Spreads and Mass Buying, then investigating restraint-of-trade practices among Canada’s largest firms. Stevens vowed to bring tobacco executives before the committee. In early May, Imperial Tobacco President Gray Miller found himself answering questions before the committee for five hours. Committee counsel Norman Sommerville made little pretense of impartiality: “The evidence showed that while the Canadian tobacco growers were toiling in the fields from dawn until dark to eke out a miserable existence, the Imperial Tobacco Company in the last five years piled up profits of $30,000,000.” ITC’s buying tactics had created “panic among the Ontario growers,” while “their wives wept in the fields;” the end result for farmers was a “trail of debts and unpaid loans.” Committee members criticized ITC for its monopolistic structure, highlighting its many subsidiary manufacturing firms (B. Houde, Tuckett, National Snuff Company, Punch Cigar, and General Cigar) and retailing operations (United Cigar Stores). Taken aback by and seemingly ill-prepared for this questioning, Miller returned to the committee four days later to better present his case, this time with “bulging brief cases, piles of papers and two trunks filled with records.” This effort, however, did little to alter the views of committee members that ITC had acted underhandedly to lower prices paid to tobacco growers.

Soon after, Imperial Tobacco confronted more bad publicity. Newspaper reports revealed the “lavish” salaries of ITC executives. Gray earned $86,000, while his predecessor in 1930 had pocketed $142,000 in salary and bonuses, this at a time when “Ontario’s panic-stricken tobacco growers were sending out Macedonian cries” of help. Tobacco growers received less than two cents of the 25-cent cost of a cigarette pack. By its own admission, ITC controlled 75 percent of the Canadian cigarette market. Walter M. Stewart, head of Macdonald Tobacco, soon after testified before the price-spreads committee, claiming that ITC executives had received “advance information”
about cigarette excise taxes in the recent federal budget. He provided no supporting evidence, though. H.C. Fortier, a tobacco wholesaler affiliated with Macdonald Tobacco, recounted ITC’s “reign-of-terror” sales practices. The ITC sales force regularly monitored the advertising and promotional displays of tobacco retailers. If a competitor’s brands were prominent, ITC salesmen threatened to revoke buy-direct privileges for the retailer, which offered higher margins than when buying from wholesalers. The testimony of these witnesses, the committee underscored, was substantiated by the “sheaf of letters from tobacconists all over Canada complaining about threats made to them by the Imperial Company.” A Winnipeg retailer described how ITC required him to devote 80 per cent of his display space to Imperial brands or lose buy-direct privileges, adding that “80 per cent means 100 percent.” While testifying before the committee, Earl Spafford, ITC vice-president in charge of sales, did little to refute these charges, claiming that Imperial’s sales force sought to “get 90 per cent of the [windowed] advertising, an amount comparable with our sales.” H.H. Stevens publicly lambasted ITC for its “dictatorial attitude” and cut-throat actions in the marketplace.

Charges involving restraint-of-trade practices and monopoly power date back to the origins of ITC. In 1895, the American Tobacco Company, which dominated the American market, sought to establish a manufacturing facility in Canada in order to circumvent the high tariffs placed on tobacco products entering British markets. It purchased D. Ritchie and Company and the American Cigarette Company, merging them to become the American Tobacco Company of Canada (ATCC). Soon after, ATCC acquired additional tobacco firms such as B. Houde and Empire Tobacco. In 1902, American Tobacco struck a partnership agreement with the Imperial Tobacco Company of Great Britain, with the goal of reducing competition in international markets. This new entity, the British-American Tobacco Company Limited (BAT), was jointly owned by its American and British parent firms. In 1908, BAT purchased ATCC and changed its name to the Imperial Tobacco Company of Canada.
italized value of $11 million, this large enterprise “dominated the Canadian tobacco industry” during the 1910s. It did so in part by its consignment system for distributing cigarettes, which effectively penalized retailers for selling or promoting competitors’ brands. It also worked to minimize price cutting of ITC brands by retailers. ITC spent generously on advertising, driving customers to stores in search of its brands, which in turn predominated in point-of-sale promotions and shelf space. While dealing with nominally independent retailers, ITC achieved a *de facto* form of vertical integration in the areas of distribution and merchandising, which weakened competitors and strengthened price maintenance. It tightened its hold on distribution channels in the early 1920s after it acquired United Cigar Stores and its 175 retail outlets across Canada. One historian described its overall marketing strategy as “both skilful and ruthless.”

When ITC bought Tuckett Tobacco in 1930, *Marketing Magazine* characterized the firm as having a “practical monopoly” of the Canadian tobacco market.

Weak anti-trust laws and lax enforcement facilitated ITC’s dominance of the tobacco marketplace. Between 1900 and 1911 the total capitalization of federally chartered corporations rose from $13 million to $490 million. In 1902, a royal commission was struck to investigate complaints that the tobacco industry had “become the victim of monopolistic control.” In the end, the federal government took no punitive actions against any firms. From 1909 to 1913, some 220 firms with assets exceeding $200 million consolidated. Ottawa responded with limited anti-trust actions. Indeed, from 1900 to 1910, only five cases were tried under existing anti-combines laws. Responding to adverse publicity surrounding the post-1909 merger wave, the Laurier government brought in new anti-trust legislation, the Combines Investigation Act of 1910. But here again the law proved ineffectual. The complaints process was cumbersome, lengthy, and often costly. Further reducing the law’s authority was the provision that prior violations would not be punished, but only those which persisted *after* an anti-combines judicial ruling was handed down. Hence, it is not surprising that such toothless legislation,
relying more on moral exhortation than legal compulsion, was invoked only once during its nine-year tenure, despite numerous examples of restraint-of-trade practices.32 As Michael Bliss notes, businessmen proved all too willing to forego the uncertainties of the market for the assurances of guaranteed profits. This “flight from competition,” extending to “every nook and cranny of the Canadian business world,”33 adopted many forms: formal and informal price-fixing agreements; mergers; supplier boycotts; foreign dumping; performance bonds; and even fines levied against violators. While during an earlier, less complicated age, unfettered competition may have abetted individual entrepreneurship and provided the most efficient allocation of economic resources, businessmen by the 1920s argued that the “invisible hand” threatened to choke them of their economic livelihood.34

The Price-Spreads Royal Commission

To H.H. Stevens, firms such as Imperial Tobacco — large monopolies able to dictate terms and prices to farmers and retailers — were the antithesis of the proper role of business in a free-enterprise economy. Before elected to the Commons in 1911, Stevens had worked as a grocer and realtor; as a Conservative MP he cast himself as defender of the small businessman and entrepreneur, both threatened by the avarice and predations of Big Business. In 1930, R. B. Bennett’s Tories came to office and Stevens was made Minister of Trade and Commerce. By 1934, he had become a regular, outspoken critic of corporate concentration, which he labelled a “canker” on the Canadian economy.35 These views earned him many accolades and heaps of fan mail from ordinary Canadians, and Bennett thought it wise to channel his ambitions into a parliamentary special committee to investigate the price spreads between what producers received for their commodities and the final prices paid by consumers. Stevens was named its chairman, and the committee met more than 60 times in 1934, hauling before it executives from firms such as Canada Packers and Eaton’s.36 In the same manner to what ITC executives experienced, committee members often lashed out at these
officials, which both the press and ordinary voters eagerly lapped up. Stevens became the “people’s hero,” a rising star among the Tory backbench and rank-and-file party members. His attacks, though, were made against the traditional financial bedrock of the Conservative Party, a concern for many of his cabinet colleagues. The work of this committee proved so politically popular, however, that Bennett opted in July 1934 to elevate its status to that of a royal commission, with Stevens again serving as chair. This emboldened Stevens, whose attacks on Big Business accelerated in the summer months, creating more friction with his cabinet colleagues and later with Bennett himself. This came to a head in October when Stevens, now lacking Bennett’s full support, resigned from cabinet. While still a member of the royal commission, he was no longer its chairman.

In March 1935, Stevens leaked the royal commission’s draft report to the press, in a bid to ensure that its draft recommendations were not watered down. When the final report was tabled in the Commons on 12 April, it offered some hard-line assessments and prescriptions. The report noted that large firms had “blocked” competition in many industries; these firms had effective “freedom from legal liability,” while also evading “moral responsibility for inequitable and uneconomic practices.” This situation “need[ed] cleansing,” with only the federal government having the administrative capability and constitutional authority to restore competitive balance to the marketplace. The first economic sector discussed in the report was tobacco. Since ITC controlled at least 70 percent of the tobacco market, this industry was characterized as “obviously monopolistic.” Canadian firms faced little competition from foreign competitors owing to high duties on tobacco imports. ITC had acted to “manipulate raw materials costs and to sell its product in a sheltered market.” While ITC enjoyed high profits, “growers, dealers, a majority of manufacturers, the Wholesaler and the retailer have been faced with meagre profits or in some cases, absolute losses.” Retailers were forced to comply with ITC’s “unfair competitive practices” or face the business-crippling prospect of seeing three-quarters of their product inventory withdrawn. The company had engaged
in “oppressive tactics and unethical methods to promote the sales of its products in every part of the country.”

Among the report’s many recommendations were calls for greater financial disclosure by corporations, including executive salaries and bonuses. Its boldest recommendation was for the creation of a Federal Trade and Industry Commission to deal with the “growth of concentration,” whose mandate would be the “prevention and regulation of monopoly and monopolistic practices,” while providing greater protection for consumers and primary producers. The commission would pursue “rigorous” enforcement of the Combines Investigations Act, which would also be amended to include a “more comprehensive definition of monopolies and monopolistic practices.” The proposed commission would work to restore healthy competition to the marketplace, with primary focus on the needs of small business, farmers, and labourers. The government bill introduced soon after to deal with the commission’s recommendations, however, proved tepid. There would be no powerful new commission; any new regulatory actions would fall to the already overburdened Dominion Tariff Board. Bennett cited constitutional concerns for this half-measure, but his simmering feud with Stevens was also a key factor.

Public Relations Advertising
For ITC, the events of 1934 and early 1935 were no doubt troubling. For decades, the company’s market dominance and international affiliation had helped to shield it from commercial uncertainty and political challenge. But here was a Conservative government, the traditional ally of Corporate Canada, attacking business practices that were at the core of ITC operations and profitability. Other warning signs were on the political hori-
zon. The newly-formed Cooperative Commonwealth Federation sought to implement a democratic socialist agenda and reduce the power of Big Business. The Social Credit Party, which later in 1935 would capture the Alberta legislature, advocated the use of monetary policy to redistribute wealth to ordinary citizens. ITC’s conundrum was qualitatively different from business problems such as expanding market share or reducing production costs. At issue here were the social legitimacy and political viability of a large corporation with a monopolistic grasp of its marketplace. In the past, Ottawa had largely turned a blind eye to corporate concentration and restraint-of-trade practices. But that now seemed likely to change.

Large American corporations facing similar situations had responded with institutional advertising to elevate their social standing and cultural authority. In the early 1900s AT&T and U.S. Steel confronted anti-trust forces with advertising designed to articulate a “corporate personality,” indeed a “corporate soul,” in pursuit of public approval. Firms such as Metropolitan Life, General Electric, and General Motors followed suit with advertising that highlighted company endeavours such as funding for the arts or workplace welfare programs. The broader aim was to have large corporations assume a place alongside “society’s basic institutions of family, church, community, and state.”50 These efforts accelerated during the Depression, when public confidence in the business system eroded. Business leaders saw themselves in a struggle to preserve free enterprise, threatened, it was thought, by the New-Deal State and Big Labour. Business needed to “tell its story” to society as a whole, in order to educate the public about its economic and social importance. In 1933, John Hill and Don Knowlton established the public relations firm Hill and Knowlton, which counselled clients such as the American Iron and Steel Institute on how to generate corporate goodwill among the public.51 For increasing numbers of corporations during the 1930s, Inger L. Stole notes, “selling business itself and its contributions to the entire economic system was just as important as selling its products.”52 Advertising, what James Webb Young called the “torch of business”, would be used to
sell the very idea of business to voters. In this vein, public relations functioned as an ongoing, “fundamental system of business hygiene,” rather than as ad hoc actions to handle periodic crises.

In January 1935, ITC launched an institutional advertising campaign, a long-running series of bi-weekly ads promoting the social and economic merits of the firm. Notably, the campaign ran well into the 1940s, long after the immediate crisis precipitating it had ended. On 28 January, an ad introduced ITC as a “faithful servant of the people of Canada,” which in the coming months would tell the fascinating story of tobacco’s journey from fields to lungs. The campaign’s significance was discussed early on in the advertising trade press. Given the focus of the Stevens Committee, it should not surprise that tobacco retailing was treated first. The ad, “Always ... Everywhere,” described how ITC brands could be found in 17,500 retail venues across Canada, making them “quickly and easily available to Canadian users of tobacco, at all seasons of the year, at all hours of the day.” Widespread distribution formed part of ITC’s broader mission “to serve the Canadian public.” The doctrine of public service appeared in ads describing the roles of scientific crop selection and advanced manufacturing in maintaining “purity and freshness” in all ITC brands. The company worked tirelessly to “satisfy, precisely and effectively, every known taste of sizable extent.” These ads then turned to working conditions at ITC. Its Montréal factory had a “well-equipped hospital” with resident nurses and doctors providing medical advice and care to employees. Milk rations were freely provided to “underweight cases.” ITC offered long-term illness and disability coverage, group and life insurance, and a joint-contributory pension fund for male employees. There were sanitary washrooms, inviting lunchrooms, and manicured gardens, all of which made the “daily round of the worker unusually pleasant and care-free.”

None of these rosy depictions dealt with wages, however. Workers in ITC’s Montréal factory, who were 70 percent female, earned an average weekly wage of $12.22 in 1933, 20 percent less than in 1929. This was low even for female-dominated sectors. For example, in the women’s clothing garment trade,
which was 74 percent female, average weekly earnings were $15.84. These facts, along with others that reflected poorly on ITC, became public in April 1935 with the release of the Royal Commission Report on Price Spreads.63 ITC, in advertising its employee welfare schemes, mirrored the actions of firms such as U.S. Steel and International Harvester. Facing anti-trust opposition, they had advertised their employee housing programs and on-site child care services in order to generate goodwill among the wider public.64

By summer 1935, ITC ads were promoting broader social contributions and scientific accomplishments. Consumers would always find their favourite cigarettes while on vacation since ITC brands were sold nearly everywhere in Canada,65 and the company’s “fair pricing” policy meant that they would not pay more in remote locations.66 ITC discouraged “price cutting,” which meant that wholesalers earned more to support their families.67 Workers in the cardboard, aluminum foil, and cellophane sectors similarly benefited from company purchase orders.68 ITC assisted tobacco growers by providing “cultivation experts” and “necessary plants for experimentation,” which in turn produced higher-grade tobacco.69 The firm’s scientists laboured constantly to create “newer, better things,” while being “always receptive to new ideas from whatever source they may come.”70 In the factory, advanced machinery rolled cigarettes at the “modern magic” rate of 23 per second.71 Months of “research and experimentation” had produced the cellophane outer wrapper for cigarette packages.72 Women employees, “carefully selected for their keen eyesight,” provided first-rate quality control.73 In the August 1936 ad, “Toward One Goal ... Perfection!” (Figure 1), readers learned how Imperial’s “continuous research” program ensured the “purity” of its cigarettes, a production standard “maintained with the meticulous care of a royal infant’s diet.” It added: “This Company spends many thousands of dollars every year upon research work alone, conducted in a spirit of ‘critical investigation’. We consider this money well invested, since it enables us to bring to you finer, more nearly perfect Imperial Tobacco products.”74 Claims such as this were not unusual during
the interwar years, when companies greatly expanded research and development operations. In the United States, the number of scientists in industry research labs increased tenfold from 1920 to 1940, rising from 2,775 to 27,777.75 As Jeffrey Meikle noted for the 1930s, corporations touted scientific breakthrough and technological innovation as markers of “unending material progress” in the Machine Age.76 While success in the cigarette industry arguably turned more on marketing know-how than on cutting-edge production techniques, ITC frequently appealed to and appropriated the cultural authority of science and industrial technology.

Figure 1. Toronto Star, 26 August 1936, p. 9.
It also invoked medical authority, as seen in the ad “These are the Facts,” which appeared in March 1937 (Figure 2).77 The ad’s text is rather banal: people smoked cigarettes for their manifold pleasures, made possible by high-quality tobacco and rigorous production methods. Cigarettes provided “pleasure, satisfaction and comfort,” but were “not in any sense a cure-all.” A curative for what exactly goes unsaid, only that the smoker’s enjoyment came from the “clean, gratifying smoke” of top-grade tobacco and manufacture. The ad’s centrepiece is a white-coated man wearing a head mirror, a common signifier for medical doctor in the early 1900s. The physician-with-head mirror (or stethoscope) was a familiar visual motif in American cigarette advertising from the 1930s until the 1950s, seen especially with R.J. Reynolds’ Camels, which had fictional and actual doctors endorse the “throat-easy” mildness of Camels.78 Canadians routinely read American magazines during the interwar years, making this visual icon part of the lexicon of familiar cultural symbols.79 The ad’s text does not mention throat irritation, coughing, or sinus troubles, all complaints made by cigarette smokers in the 1930s. The industry’s response to this feedback was to introduce filtered and menthol brands, promoted for their “cooler”,

Figure 2. Toronto Star, 24 March 1937, p. 5.
milder attributes. The ad’s iconography references this health context; the physician, staring intently at the reader while holding up a cigarette, symbolically yokes medical expertise to advance meanings of consumer safety and health reassurance. This is done both for cigarettes in general and ITC brands in particular, since these brand names are listed in the ad, one of the first to do so in this campaign.80

Since the late 1800s, moral and social reformers had derided cigarettes as unhealthy; they stunted growth, weakened lungs, and caused other mental and physical “degeneracies.”81 While such critics were largely discredited by the 1930s, unease over the healthiness of cigarettes continued in the vernacular vein of “coffin nail” and “cancer stick” quips. Interwar clinicians used the term “Tobacco Heart” to describe smoking-related angina, arrhythmia, and cardiac arrest.82 In 1928, the New England Journal of Medicine published an article showing a causal link between tobacco smoking and cancer.83 In 1931, the insurance industry researcher Frederick Hoffman released a study that causally pegged booming cigarette consumption to rising rates of lung cancer.84 Similar research was done and published in South America and Europe during the 1930s, most notably in Nazi Germany.85 These findings were generally not taken up by the press, and medical doctors, arguably a majority, remained skeptical that tobacco caused disease.86 But tobacco companies, in at least one instance, were aware of these nascent findings. In 1939, the research director at American Tobacco, Hiram R. Hanmer, responded to a query about Angel H. Roffo, the Argentine researcher whose work with lab animals and cancer patients had shown causal relationships between tobacco tar exposure and cancer. Though Roffo’s work was published mostly in German and Spanish, Hanmer was not caught off guard: “We have been following Roffo’s work for some time, and I feel that it is unfortunate that a statement such as his is widely disseminated.”87 By the late 1930s, Alan Brandt argues, tobacco smoking’s role in causing cancer had become a subject of “unresolved debate.”88

Public relations advertising functioned to influence “unresolved debates,” aiming to align public interest with corporate
interest. In 1939, Earle Spafford, ITC vice-president, reflected on the firm’s institutional advertising campaign, now four years old: “We have tried to imagine ourselves chatting to our customers face to face,” presenting the “human side of the industry — what it means to the people who depend upon it for their livelihood or look to it for a form of enjoyment.” Well before the tobacco industry’s massive public relations response to the “cancer-scare” crisis of the 1950s, Imperial Tobacco had become versed in the art and mechanics of institutional advertising, articulating and promulgating its “corporate soul” to the Canadian public.

**Political Economy of Tobacco**

One of ITC’s institutional ads spotlighted Canada’s tobacco farming sector. “Canada” is perhaps a misnomer, given the crop’s geographic specificity. In 1938, Ontario produced 97 percent of the country’s raw leaf tobacco, most of which was grown in the “new” tobacco belt of Norfolk, Elgin, and Oxford counties in southwestern Ontario. As late as the mid-1920s, very little tobacco was grown in these counties; only then was the area’s sandy soil shown to be suitable for bright leaf, flue-cured tobacco used in cigarettes. Tobacco farming and the flue-curing of bright leaf began soon after and spread quickly. By 1937, the value of Ontario’s tobacco crops reached nearly $15 million, with farmers fetching much higher prices than those in the early 1930s that had caught the attention of H.H. Stevens and others. In 1937, they received 27 cents a pound, up from 16 cents in 1932. By 1939, Ontario’s tobacco fields supplied nearly all of the domestic market for cigarette production, while also exporting 27 million pounds of flue-cured tobacco.

The late 1930s were heady times for tobacco growers and their communities, as a *Maclean’s* reporter discovered. Tobacco-growing counties had “scorned the depression,” as seen by the building boom in hotels, theatres, and stores. Towns such as Simcoe, Delhi, and Tilsonburg had lowered municipal taxes, paid off debentures, and reduced relief rolls. Simcoe had built a new public pool, tennis courts, and floodlit baseball diamonds. It had
three cinemas, up from one in 1935. The ITC-owned processing plant in Delhi hired up to 1500 workers each fall to sort, grade, and process flue-cured tobacco leaf. Tilsonburg’s housing shortage was matched by a sea of parked cars on its main street on Saturday afternoons. Garnet Murphy, who had recently moved to the area to drive a taxi, had no regrets: “Am I glad I came to Simcoe? Mister, glad’s not the world for it. I’m singing!”

While most tobacco was grown and cured in southwestern Ontario, the bulk of manufacturing occurred hundreds of miles away. In 1939, 87 percent of the nearly $70 million tobacco manufacturing industry was located in Québec, mostly in Montréal, where firms such as ITC and Macdonald Tobacco were based. That year, tobacco manufacturing employed nearly 11,000 people, whose $9.7 million in wages and salaries would have circulated mostly in and around Montréal. As noted earlier, the industry was also highly concentrated, with the handful of firms producing over $1 million in goods comprising 91% of the total sector. Tobacco farming and manufacturing played relatively small roles in the Canadian economy. In 1939, tobacco farming comprised less than three percent of total crop values, while manufacturing operations formed less than two percent of the country’s gross value of production. But the inverse was true for taxation. In 1938, the federal government collected nearly $36 million in tobacco excise taxes (and, to a much lesser degree, custom duties on tobacco), accounting for eight percent of Ottawa’s total tax revenues ($436.2 million) that year. ITC alone provided roughly seven percent of federal tax revenues, a fact it advertised as “serving the national treasury.” Prior to World War II (when personal and corporate income taxes rose precipitously, reducing the relative weight of excise taxes), almost one in ten federal tax dollars came from a handful of Montréal manufacturers and, by extension, tobacco farmers in three Ontario counties. Never again would the Canadian tobacco industry wield as much fiscal clout as it did in the 1930s.

The political implications of this are noteworthy. In 1935, the federal Liberals won office in an electoral landslide, taking 171 of 245 seats. The Liberal Party remained in power until 1957, later
dubbed the “Government Party” for its longstanding political acumen and administrative competence. In 1935, the federal Conservatives elected four members in Montréal, one less than its haul for the entire province. In the 1940 federal election, the Tories were shut out of Montréal, a losing streak that continued until 1953. The federal Liberals reigned supreme in Québec for more than 20 years after 1935, winning more than 80 percent of its seats and nearly all of those in Montréal. In Ontario, seven federal ridings (Brant, Brantford, Elgin, Haldimand, Middlesex-East, Norfolk, Oxford) were located in or abutted tobacco growing areas. Here again the Liberals proved dominant, winning all but one of these ridings in 1935 and 1940. The federal government held jurisdiction over excise taxes, so tobacco-related revenues flowed to Ottawa and not the provinces. Provincial sales taxes at this time were negligible, totaling just $2 million of the $245 million in provincial government revenues in 1937. In contrast to recent decades, then the provinces factored little in the regulation and taxation of tobacco. The tobacco industry — a non-competitive, highly concentrated sector — looked out onto a political landscape strikingly similar to itself. Its political dealings were mainly with only one level of government that was controlled by the same party for a generation. The bulk of its factories and workforces were in the Liberal fortress of Montréal, ensuring continual representation by government MPs. A near monopoly industry had for its political bedfellow a quasi one-party state.

Cigarettes and Culture: Women Smokers

The political-economic might of the tobacco industry was paralleled by the expanding cultural reach of cigarettes in the 1930s. In 1920, pre-rolled cigarettes comprised 42% of the manufactured tobacco product market in Canada, rising to 63% by 1939. Per-capita sales of cigarettes rose 78 percent from 1932 to 1939, while cigar consumption in that time declined by seven percent. Some of this growth came from pipe and cigar smokers, mostly men, switching to cigarettes. But another factor is
significant: women enthusiastically took up cigarette smoking in the 1930s. Cigarette companies did not market directly to women until the late 1920s. The first such campaign occurred in 1927 with advertising for ITC’s Player’s Navy Cut, whose tagline read: “Men may come and men may go, but Player’s Navy Cut are a constant ever.” The campaign was deemed risky, not for its sexual innuendo but for concerns that appealing to women would embolden the “puritanical fanatics” who opposed cigarettes outright. Later ads in this campaign featured bobbed, stylish women smoking cigarettes. A year later, a writer in the advertising trade press commented on the many “tea table matronly” women in cigarette ads, a hopeful sign that female smoking was moving beyond the “flapper” set. Jarrett Rudy similarly notes that cigarette advertising in Montréal dailies did not target women directly until the late 1920s. But by the early 1930s much had changed, as seen with the many cigarette ads aligning female smoking with ideals of the modern, middle-class woman who was recreationally active, sexually confident, and upwardly mobile. A reporter surveyed Toronto tobacconists in 1930 and learned that female cigarette buyers were no longer “steal[ing] out furtively ... with their packages in paper bags.” Mackenzie King, at the wedding of a friend’s daughter in 1933, remarked (disapprovingly) in his diary about the ordinary manner in which the bride smoked cigarettes alongside the groom, even while toasting with champagne. In 1934, Queen’s University established a smoking room in its women’s residence, ostensibly with a “view to having cigarette smoking by girl students confined in close quarters.”

Women featured prominently in cigarette ads in newspapers, magazines, and on billboards, which in turn served to normalize female smoking while communicating symbolically in other ways. Images of women as steeple-chase racers or convocating students broadened the range of recreational pastimes and professional endeavours that were socially permissible for women. These ads offered revised notions of womanhood, in which pleasure seeking behaviour co-existed with social respectability. Ads depicting women smoking in social settings or out in
public reinforced the then radical idea that women receive equal opportunity and treatment in all areas of public life. \(^{123}\) “This summer especially,” commented one tobacconist in 1937, “I’ve noticed a good many women smoking on the street, exercising their equal rights with men.” \(^{124}\) Cigarettes functioned as erotic signifiers, providing “otherwise respectable women,” Sharon Anne Cook argues, a “licence to develop and exercise a sexually charged and independent persona in ways that probably would not have been possible for them, given the restrictive societal norms that governed women’s behaviour.” \(^{125}\) The 1930s “Modern Girl” projected her “independent woman” \(^{126}\) status via cigarette smoking, a notion playfully rendered in a 1938 ad for Sweet Caporals. In the ad a hopeful man leans toward a young woman standing under some mistletoe and asks: “Have you seen the mistletoe?” Her response: “Yes — but where are my Sweet Caps?” \(^{127}\)

**Cinematic Smoking**

Hollywood offered up more female smoking role models. Lacking a domestic feature-film industry, Canadians avidly watched American movies during the 1930s. \(^{128}\) One study of Hollywood cinema of the 1930s found that 30 percent of heroines smoked, compared to three percent of female villains. \(^{129}\) In “Morocco” (1930), Marlene Dietrich orders her male companion to “cigarette me, big boy,” a form of sexual bravado matched by Jean Harlow in “Hell’s Angels” (1930) when she asks a soldier “to come up for a cigarette and a drink?” \(^{130}\) Women smokers in film “telegraphed sexual desire without there needing to be any further demonstration of her interest.” \(^{131}\) The sex symbol Mae West smoked cigarettes throughout “I’m No Angel” (1933) and “She Done Him Wrong” (1933), and her publicity photos often pictured her with cigarette and extended holder. The Hays Production Code, adopted in 1934, required filmmakers to curtail sexualized behavior and discourse, which in turn resulted in greater use of on-screen smoking to convey sexual messaging. Bette Davis, in “It’s Love I’m After” (1937), blows smoke in a lover’s face as a form of sexual invitation. \(^{132}\) Male sexual desire took the form of lighting two cigarettes and placing one in a
woman’s mouth. Cinematic smoking conveyed more than sexual meanings. A character’s shyness or awkwardness was shown by fumbling with matches or cigarettes. Anxiety manifested itself as staccato puffing or chain smoking. Male dexterity and ingenuity were displayed by lighting a cigarette one-handed. Cinematic smoking constituted “an implicit language of gestures and acts” that facilitated character definition and plot development.133

Many people, especially youths and young adults, were attracted to the glamorized portrayal of smoking on the big screen. A Mass Observation study in Britain attributed the upswing in smoking’s perceived sophistication to its positive portrayal in Hollywood movies of the 1930s.134 Smoking film stars were sexy and savvy, dynamic and discriminating. For young women, the visual, performative nature of cinematic smoking — its ability to project personality types and character traits — proved especially captivating.135 Many on-screen smokers also endorsed cigarettes in advertisements. A Gold Flake ad in 1935 promoted the Alfred Hitchcock film “39 Steps” by featuring its two stars, Madeline Carroll and Robert Donat. The ad reminded readers to see the upcoming movie and highlighted Donat’s “magnetic charm” and “hint of sophistication” that captured women’s hearts. “His cigarette, of course, is a Gold Flake.”136 In 1937, American Tobacco contracted with more than 40 stars and their Hollywood studios to advertise cigarettes in conjunction with film-release dates. In one instance Gary Cooper, in a testimonial ad for Lucky Strikes, plugs his upcoming film, “Souls at Sea.”137 This form of synergistic cross promotion enhanced the studios’ bottom line, broadened the star’s public exposure, and boosted the cultural standing and popular appeal of cigarettes, both for particular brands and the entire product category.

Ordinary Habits
Cigarettes proved ideally suited to a modern, urbanizing society. (In 1931, for the first time, the census counted more urban than rural Canadians.)138 Cigarettes could be smoked quickly in an increasingly time-pressed society.139 They could be smoked while doing other activities: preparing dinner, working a switchboard,
processing insurance claims. Cigarette smoke was more palatable than that of cigars or pipes, an important consideration as people spent more time in enclosed spaces such as office buildings, streetcars, and stores. The anonymity and alienation of city life were eased by conversation breakers such as “Got a light?” or “Mind if I smoke?” Asked by a young woman about a suitable gift for her 19-year-old boyfriend, etiquette columnist Kathrine de Peyster suggested “a carton of the young man’s favorite cigarettes, or a book.” Their ubiquity spawned a sea of accessories: smoker cabinets, ashtrays, car lighters, cigarette cases, and even waterproof belt buckles for holding cigarettes while swimming. Eaton’s sold a “Smo-kee” handbag, with an in-built cigarette case, and a vanity bag equipped with a pop-up cigarette case. Life Savers chewing gum advertised itself as a “cigarette’s best buddy” for freshening the mouth, and Wrigley’s Juicy Fruit promised to make “the next smoke taste better.” Elizabeth Arden toothpaste was a “boon to cigarette smokers who like to keep fastidious always.” The patent medicine “Kellogg’s Asthma Relief” even came in cigarette form.

Cigarette smoking infused visual description and linguistic expression. Wool suits in an Eaton’s ad came in “Swagger Blue” or “Nicotine Brown,” while dresses were sold in “Sky Mauve” or “Cigarette Brown.” A Chrysler roadster came “finished in beautiful cigarette cream shade.” An Eaton’s ad for Orchid Eye Shadow promised to make your eyes as “soft and purplish-blue as the smoke from your favourite cigarette.” Advice on waist-thinning exercises came in this form: “since you are probably counting on a cigarette silhouette by next Tuesday, you will want the best.” To demonstrate the heat-resistant quality of the surface of Frigidaire refrigerators, salesmen placed lit cigarettes on them. How fast could Uptown Tire change your tires? They’d “put them on while you enjoy a cigarette.” How affordable was the food supplement Knox Gelatine? It “cost less than a pack of cigarettes per day.” Aqua Velva was even cheaper, costing “less than one cigarette a day.” Cigarettes — as metaphor, point of reference, or adjective — permeated the popular vernacular of Canadians by the late 1930s.
Premium Habits

Premium promotions further ingrained cigarettes into the daily lives of Canadians. The most popular of these was ITC’s “Poker Hands” promotion, launched in 1925 by its Turret brand. Poker hands were included in cigarette packages, to be collected and later redeemed for prizes such as umbrellas or bridge sets. This promotion grew increasingly popular and by the mid-1930s most of Imperial’s cigarette brands (Turret, Sweet Caporals, Winchester, Guinea Gold, Millbank) offered Poker Hand gift rebates. By 1935, more than 200 gift items were available. At the low end, there were items such as playing cards, toilet soap, and toothpaste. At mid-level, consumers chose from gloves, socks, or teapots. Those with many poker hands could select from silver cutlery sets or tea settings. There were gifts for men (shaving cream, suspenders), women (stockings, face powder), and even children (doll, harmonica, toy dog). Brand name goods such as Gillette razors and Eastman film were available. Practical items such as scissors and kettles could be had, as well as refined display goods such as cut-glass tumblers and silver-plated comports. All of these were presented in illustrated catalogues, disseminated widely across the country (Figure 3). Smokers could redeem poker-hand coupons for gifts at any of the more than 20 “Poker Hand Premium Stores” in 17 cities across Canada, including four in Montréal. In 1935, rumours circulated that ITC planned to cancel the promotion, spawning long, bank-run style lines at stores, as one journalist noted: “At the height of the ‘run,’ long queues formed and scores of people patiently waited for their premiums while the staff worked at high pressure counting coupons with machine-like rapidity.” ITC took out newspaper ads denying the rumour.

Other cigarette makers followed suit. Macdonald Tobacco offered 100 or so premium gifts in exchange for cigarette-package panel fronts. Grothe’s Grads cigarettes, marketed as a high-end brand, had a “Save the Bridge Hands” premium promotion. My Fortune cigarettes advertised $1,500 in monthly cash prizes. For ITC and other cigarette makers, premium marketing promoted volume selling and brand loyalty. At a broader
level, it allowed people to acquire goods which might not otherwise have been possible in a Depression-era economy. By making cigarettes the conduit to a cornucopia of material goods, premium marketing reinforced the centrality of cigarettes in the emerging consumer society. Cigarettes provided not only corporeal pleasure and social engagement; they functioned as a *de facto* currency in an exchange system featuring a wide array of consumer goods. Through their alignment with “badge goods” that included cut-glass tumblers, cigarettes also absorbed symbolic meanings whether cultural refinement or social respectability, what semioticians refer to as “associative transfer.”

Contest promotions were also common, many involving sports. In 1932, Turret awarded $15,000 in cash prizes to those correctly guessing total goals scored in the current NHL season. Winning entries on Turret packages earned double the prize amounts. Some three million entries were received, and Turret held a similar contest for the following NHL season. Draegerman cigarettes offered NHL tickets for those guessing the time of the first goal at an upcoming Toronto Maple Leafs game. British Consuls paid out $100 in weekly prizes in 1933 for correct estimates of weekly goal tallies in the NHL. Sports-related advertising was similarly widespread. Turret promoted Australian billiards pro Walter Lindrum and his upcoming match in Canada with British counterpart Tom Newman, with the winner...
CIGARETTE MARKETING AND SMOKING CULTURE IN 1930s CANADA

receiving the “Turret Cigarette Trophy.” Gold Flake cigarettes sponsored an American bridge team in 1933, which toured Canadian cities, playing matches against local teams. In larger halls, “each play [was] flashed upon a large board” so spectators could follow the action. Philip Morris launched a campaign in 1936 featuring NHL stars, including Lionel Conacher, Syl Apps, and Turk Broda, all touting the “mild, smooth, satisfying” merits of its Navy Cut cigarettes. Buckingham advertising featured many testimonials from sports figures, among them tennis pro Bill Tilden, Toronto Argonauts coach Lew Hayman, and golf pro Jules Huot. After five hours in a steel barrel coursing through the Niagara rapids, daredevil William Hill’s “first thought on coming out” was for a Buckingham cigarette. Goody Rosen, the “Toronto boy who made good” by signing with the Brooklyn Dodgers, talked up Buckinghams for steadying his nerves and concentration during baseball play. Toe Blake, the NHL’s leading scorer in the 1938–39 season, promoted the “throat easy” mildness of Buckinghams in 1939.

Health Marketing

This “Throat Easy” theme became a fixture of Buckingham advertising, especially after 1930 when ITC bought the Tuckett Tobacco Co. which marketed the brand. Testimonial ads featured actors, singers, and radio hosts, people whose professional livelihoods depended on vocal performance. Radio announcer Herb May explained that “if a cigarette irritated my throat, I’d have to give them up.” But Buckinghams were “easy on my throat.” Louise King, who “sang every night,” championed the brand’s “throat-easy” attributes. Buckinghams were the “only Cigarette treated by Ultra Violet ray in Canada,” making them milder for mouth and throat. Similar appeals were issued by other brands. Benson & Hedges promoted Oxford cigarettes as “mellow mildness for delicate throats.” Advertising for Grothe’s Roxy brand read: “Give your throat a permanent VACATION” from “harshness, bitterness and bite in your cigarette smoking.” Smoke Roxy and “rule out throat irritation and morning after
effects.” Grothe also took out an ad in the form of an “unsolicited testimonial” letter from a physician who found Roxy “less irritating to the throat than any cigarette I have ever smoked.” This theme was picked up by ancillary products. Allenburys Pastilles promised relief from throat irritation caused by “one cigarette too many.” Smith Brothers Cough Drops were there “when your palette is as dry as dust from smoking.” Ads for Zubes Lozenges hailed “Chain Smokers—with gravel throats.” The Denicotea cigarette holder allowed people to “smoke the healthy way” because the holder’s cartridge “remove[d] the harshness, prevent[ed] throat irritation and give[ve] your favorite cigarette a new mildness.”

The most significant marketing response to smoking-related health concerns in the 1930s came in the form of menthol and filtered cigarettes. Introduced in Canada in the early 1930s, menthol cigarettes provided an anesthetizing, cooling effect in the mouth when smoked, reducing the harshness of the cigarette smoke. Menthol had long been used as a medicinal cough suppressant, and tobacco makers sought to draw on its “therapeutic association with cough and cold remedies” to appeal to health-concerned smokers. In the United States in the late 1920s, Axton-Fisher introduced Spuds, the first “menthol-cooled” brand, encouraging smokers to try them when they had colds or sore throats. Spuds arrived in Canada in the early 1930s, with ads touting its mentholated “cool smoke” for “leav[ing] most of its irritants in the butt of the cigarette.” Later Spuds ads described how “tongue-bite” in cigarettes was caused by the “heat in the smoke”, which could be avoided by using “menthol-cooled Spuds.” Another ad carried the header, “Nagged by Nicotine?” and asked readers: “Do you smoke a lot, and worry about what cigarettes are doing to you? You can ease your mind by making better use of the filter effect of the butt of your cigarette. Here’s how: pull lightly when you light up. Smoke slowly, and not too far down. But to get real smoking enjoyment, try Spuds ... whose menthol-process naturally condenses more of the tars and acids ...” The “filter effect” did not involve an actual filter (though Spuds also came in a cork tipped version), but was rather a preventative technique per-
formed by the smoker to minimize the intake of “tar and acids.” Other Spuds ads described how menthol produced a “16% cooler smoke”, prevented “tongue-bite and husky-voice”, and kept the smoker’s “tongue and throat in moist-cool comfort.” Cameos were “air-conditioned by menthol” and when inhaled they were as “cool as a fresh breeze.” A 1938 seasonal ad for Cameos featured Santa Claus saying: “Say CAMEO When you want a Menthol Cigarette.” Advertising for Macdonald’s Menthol (with “cool as a Cucumber” written on the package) featured a woman smoking a cigarette with the caption: “Doctors Recommend Them.” She adds: “When I changed to Macdonald’s Menthol my throat said ‘O.K.’ ... so did my doctor.”

Filtered cigarettes appeared in Canada in the mid-1930s and were widely advertised for their health benefits. The niche brand De Reszke promoted its filtered cigarettes for “not only [preventing] particles of tobacco from entering the mouth, but also [filtering] any harmful nicotine out of the smoke.” In May 1936, Brown & Williamson launched Viceroy, the first major filtered cigarette brand in the United States; it did well in the market, selling some 20 million packages in the first six months. Afterwards major filter-brand launches occurred in Canada. British maker Carreras launched Craven ‘A’ in Canada in 1937. These cork tipped cigarettes, a man proclaims in one ad, were a healthy choice: “I know from medical experience that a cigarette made specially to prevent sore throats is the right cigarette to smoke.” In another Craven ‘A’ ad, a caption reads: “as a doctor I cannot recommend any brand but personally I smoke Craven ‘A’.” In 1937 Macdonald Tobacco introduced a filtered version of its flagship Export brand, promising consumers “new smoking enjoyment” since the filter worked to “eliminate nicotine.” (The belief that nicotine, and not tar, was potentially harmful was likely reinforced by ads for insecticides touting nicotine as the active ingredient.)

The most heavily advertised filter brand was Peter Jackson’s du Maurier, launched in fall 1936. Its filters constituted the “first vital improvement ever made in cigarettes,” a technological feat on par with “wireless, air-conditioning, and streamlining.” The
filters removed “smoke impurities” and delivered “real cigarette pleasure.” (Figure 4) In countless ads running many years, men and women lauded the merits of filtered smoke, calling on consumers to “discover for yourself why all that could harm is trapped in the tip, all that delights come through.” The du Maurier filters “refined the smoke while the cigarette burned” and “trapped only irritants.” The ads did not disclose the composition of the filters, but most cigarette filters in the 1930s were made from fibrous materials such as wool, cotton, or paper. Most of these ads carried added medical conviction in the form of an endorsement from The Lancet, a leading British medical journal, which read: “We have tested these cigarettes and find them to be cooler and less irritating than ordinary cigarettes of good quality without the Filter Tip.” Later, in 1954, Imperial Tobacco acquired the rights to du Maurier and the brand which would later become its top seller, largely due to its appeal to women. In its official corporate history, ITC attributed du Maurier’s success in the 1930s to marketing efforts that were “aimed

Figure 4. Globe and Mail, 21 December 1936, p. 7.
CIGARETTE MARKETING AND SMOKING CULTURE IN 1930s CANADA

specifically at women.”193 But, as shown here, du Maurier advertising in the 1930s was largely unisex, appealing generically to men and women with a core message: du Maurier filters offered a modern, technological solution for people’s health concerns about cigarettes. They made cigarette smoking safer, less worrisome, by removing harmful ingredients in tobacco smoke that could irritate and damage mouths and airways.

Conclusion

In November 1939, an ITC institutional ad praised the role of cigarettes during wartime: “We in the tobacco industry are glad to recall that our products played no small part in keeping up the spirits of the troops, spirits so high that the men could laugh at themselves and their discomforts even in the most critical and arduous hours.”194 World War II would prove even more beneficial to the cigarette industry than did the 1914–1918 conflict. Per-capita cigarette consumption nearly doubled between 1939 and 1945,195 and the industry’s public image was enhanced by its support for community and charitable cigarette drives that sent tens of millions of cigarettes overseas to Canadian troops.196 Few spoke of ITC in terms of “oppressive tactics and unethical methods,” as had the Price Spreads Royal Commission a decade earlier. ITC continued its institutional advertising campaign until 1942, by which point public concerns over corporate concentration and price fixing in the tobacco trade had been displaced by wartime imperatives. The tobacco industry stood on solid ground in 1940. Geographically concentrated in Montréal, tobacco manufacturers confronted few competitive pressures, since two companies controlled more than 90 percent of the cigarette trade. Bright leaf tobacco farming was similarly concentrated in a belt of sandy soil in south-western Ontario.

The cultural landscape of smoking had changed remarkably by 1940. Women were now bona fide cigarette smokers. Whether seen with etiquette columnist advice that cigarettes at dinner parties be “passed after the salad course”197 or with press accounts of women smoking outdoors and “exercising their equal rights with
JOURNAL OF THE CHA 2014 / REVUE DE LA SHC

men,” cigarette smoke had acquired decidedly feminine hues by decade’s end. Women appeared regularly in cigarette advertising and female leads in Hollywood films frequently lit up, both on and off the screen. This served to align cigarettes with desirable personality types and character traits, a powerful and emulative message for women experiencing new social settings involving workplace, post-secondary institution, dance hall, or street car. Cigarette advertising, coupled with smoking in public, functioned symbolically to strengthen notions of political and personal empowerment for women. Cigarettes meshed well with urban living, integrating seamlessly into modern routines of leisure, work, romance, and family life. The cigarette-as-metaphor shaped vernacular understandings of fashion, body type, time, and personal finance, to name a few. In advertising and smoking behaviour, cigarettes ingratiated themselves with popular pastimes such as bridge, poker, and bingo. In gift rebate catalogues, they shared space with desirable consumer goods such as Gillette razors and ceramic tea pots. Here, as Kenneth Lipartito and others have argued, the work of business and cultural history effectively co-penetrate, as cigarette marketers laboured to discursively conflate particular brands with particular forms of popular culture, seen both with devotees of the NHL and Louise King.

A recurring vein of marketing discourse involved descriptors such as “mild”, “mellow”, and “throat easy,” which appeared often in advertising and on cigarette packages. A regular smoker might consume 50 or more cigarettes per day, producing side effects such as coughing and throat irritation. Some in the trade drew from the alcohol industry’s playbook and counselled “moderation” in cigarette smoking. But the pharmacology of nicotine addiction (even if little understood then) propelled many to smoke more cigarettes than they may have wanted. Nicotine dependence and chain-smoking — what made cigarette smokers such profitable repeat-business customers — produced unwanted side effects that clashed with the urbane, fashionable image of cigarettes framed by advertising and cinema. The tobacco industry’s “remedy” for this came in the form of menthol
and filtered cigarettes, both introduced in the 1930s. Menthol’s prior therapeutic association with cold remedies, coupled with the cooler taste sensation of mentholated tobacco, was meant to appeal to those who worried about cold-like symptoms arising from smoking. Similarly, high-tech, modern filters promised to trap harmful particulates in cigarette smoke that diminished flavour and inflamed tissue. As a 1937 du Maurier ad proclaimed: when “you filter the smoke it’s bound to be cleaner.” While sales of filtered brands declined in the 1940s, this trend, ultimately, proved short-lived. After news stories in the early 1950s linked cigarettes to lung cancer, the industry re-introduced filtered cigarettes to stunning effect: filtered brands in Canada rose from two percent of the market in 1952 to 55 percent in 1962, buttressed again by forms of “health marketing” designed to reassure existing and prospective smokers. As we have seen, the industry’s response to the “cancer scare” of the 1950s was not novel, but one that drew upon the cultural lexicon of cigarette promotion dating back to the 1930s.

Wholesaler and retailer margins on cigarettes were slim. In 1930, the manufacturer “value at factory” for a 20-pack of cigarettes was 19.5 cents (which included a 12-cent excise duty), which most often retailed for 25 cents. In 1938, owing to a 33 percent reduction of the cigarette excise tax, the “value at factory” cost dropped to 15.4 cents, with advertised retail prices for 20-packs typically at 20 or 25 cents. Ottawa, DBS, *Statistical Handbook of Canadian Tobacco*, 1941, 12; Ottawa, Department of Labour, *An Investigation into an Alleged Combine in the Distribution of Tobacco Products*, 1939, 6.
Toronto Star (9 March 1934), 13. For a humour-inflected version of this, see: “The doctor’s opinion that tobacco causes your trouble would be more impressive if his cigarette didn’t smell so good,” Toronto Star (25 September 1933), 17.
