# A STATEMENT OF EMPLOYER-EMPLOYEE RELATIONS

ROGER VÉZINA

The Canadian Chamber of Commerce has just published the results of a survey<sup>1</sup> conducted in some 1,300 Canadian enterprises having in their employ ten or more workers. The questionnaire, which the employers answered, was divided into two parts and covered the vast field of employer-employee relations on one hand, and the measures of social security, properly speaking, on the other. The results of the inquiry demonstrate that if employer-employee relations are still in their infancy, social security measures have made giant strides in the last few years. In the majority of the enterprises consulted group insurance and pension plans existed already, as well as hospitalization and sickness indemnities. The four tables which illustrate this article, kindly put at our disposal by « Canadian Business », official organ of the Canadian Cham-

ber of Commerce, are very revealing on this last claim.

## *Employer-Employee Relations*

The first part of the questionnaire, dealing with employer-employee relations, contained no less than eighteen questions designed to show the numerous ways of establishing and maintaining such relations and the degree of popularity in the enterprise of each of them. Compiled in a good sixty statistical tables, the answers received were separated into two general groups. The first illustrated the total of the responses given by the 1,309 enterprises, which themselves were divided into five numerical groups: from 10 to 99, 100 to 249, 250 to 499, 500 to 999, 1,000 to 4,999 and 5,000 employees and more. The second illustrated the total of the responses given by only the manufacturing enterprises, 730 in all, which themselves were divided into five numerical groups of 10 to 99 employees, etc., etc. It goes without saying that it is abso-

lutely impossible for us to analyse in the bounds of this brief article, statistical tables which embrace not less than a good fifty pages. We will content ourselves then with some findings capable of showing the degree of popularity of such and such a policy of employer-employee relations, such and such a measure of social security.

Thus, the answers given show that:

1. In 456 enterprises, of which 321 are manufacturies (out of a total of 1,309) one or more persons are occupied specially with the problem of employer-employee relations. Expressed in percentages the totals give us 35% of all the enterprises consulted and 44% of the enterprises only manufacturing;
2. To date, only 167 enterprises, or 13% of the total, have already consulted the opinion of their employees;
