The growth of interest in Canada's urban past is evident by the number of publications and completed theses in several disciplines that have recently appeared. And yet, judging by the amount of research currently underway, we have seen only the tip of the iceberg. The following is a preliminary list of researchers and projects partly based on a questionnaire I sent out last July. It is certainly far from complete; I would estimate it includes no more than two-thirds of those working in the field. Publication here hopefully will remind those whose names do not appear to submit their research topics to me for inclusion in subsequent years.

The list includes 130 researchers, working on various places and themes and employing a variety of methodologies. Almost all are associated with a university; more than half (75) are working for a graduate degree, but many of these are also full-time faculty members. Several are employed by government branches such as the National Museum of Man. Unfortunately the list does not include writers of popular urban biographies for they seem to work in isolation from the academic community (eg. Paul O'Neill on St. John's). It must be mentioned that many of those whose names appear here do not regard themselves as "urban historians". However, their research relates explicitly or implicitly to the historical development of particular cities and towns or to the broader aspects of urbanization in the past. A fairly broad spectrum of disciplines in addition to history is included. Geographers are by far the most active among the social scientists while the interest among those in planning and architecture appears to be growing. On the other hand, relatively few sociologists or economists seem concerned with the historical dimension of urban studies. The involvement by geographers has been accompanied by a tendency by some whose training and research interest were not Canadian to make the Canadian city a part of, or the primary portion of their work (eg. James T. Lemon, Deryk Holdsworth, Fred Dahms). Among historians, several whose work is well known in other areas of Canadian history have recently become involved to varying degrees in urban history (eg. T.W. Acheson, William Kilbourn, Patricia Roy, and John Saywell).
Regionally, the study of urban history is heavily concentrated in Ontario (74 out of 130 listed) with the University of Toronto and its graduate program long a leader in this field. But there are signs of decentralization, most obviously in the West (26; 16 on prairies, 10 in B.C.), but also in the Atlantic provinces (19). Quebec's scholars have other priorities (only 10 are listed here but this is surely not complete), but the significant research project on 19th century Montreal society at the Université du Québec à Montréal led by Paul-André Linteau, Jean-Claude Robert, and Jean-Paul Bernard undoubtedly will provide the example and the stimulus to new interest in this region.

The local nature of urban history is reflected in the high degree of correlation between where you work and what place you work on. Only Ontario-based academics are studying places in regions other than where they live to any appreciable degree. Research topics which can be directly related to a specific region include 46 for Ontario, with 25 on the West (prairies 18; B.C. 7), 20 on the Atlantic provinces and 19 on Quebec. The study of particular cities corresponds to this regional pattern. Toronto is the most avidly examined place (26), followed by Montreal (13). At least 7 are working on Vancouver; 5 on Winnipeg; 4 on St. John's, Saint John and Quebec City; 3 on Halifax, Hamilton, Calgary and Kingston. The renaissance of research on St. John's, Saint John and Kingston, after being neglected for more than 100 years, is noteworthy. By comparison, Ottawa, Victoria and the Saskatchewan cities are being relatively ignored.

In terms of approach, the emphasis appears to have shifted away from economic topics and the traditional biography to what is generally described as "social" history (36). This includes everything from systematic analyses of social structure to descriptions of institutions and groups. Of the systematic projects, the Hamilton study directed by Michael Katz has led the way in finding new methods for understanding family and class in 19th century urban society. Several studies of particular ethnic groups in cities are underway and there is some indication of interest in the relationship between the urban setting and social institutions such as the church and the school. Those who deal with economic growth (15) are broadening their concerns beyond a previous emphasis on the role of the business elite, and those working on
government and politics (15) tend toward reform movements. A growing number of researchers are finally examining aspects of Canadian urban history which have become highly specialized sub-fields in British and U.S. urban history; these include the study of the social implications of spatial expansion (12), the history of planning (10) and housing or housing policy (5). There are still very few efforts being made to compare Canadian cities with those elsewhere; a notable exception is Norbert MacDonald's comparison of Vancouver and Seattle. Current work on over-all explanations or descriptions of Canadian urban development includes the analysis of metropolitanism by J.M.S. Careless. The urban biography, often in disrepute in the academic community (and for good reason) is making a comeback in a new format in the projected Urban Biography Series to be published by the National Museum of Man and edited by Alan Artibise. A biographical approach, in which the relationships between a variety of factors in a city's development are examined, could prove to be an important addition to Canadian urban history as has been demonstrated by Artibise's Winnipeg. Chronologically, the great bulk of research concentrates on the late 19th and 20th centuries, understandable in a country where a high degree of urbanization is a relatively recent phenomenon. The result, however, has been a lack of serious examination of the origins of cities during the 17th and 18th centuries in French Canada and the Atlantic provinces.

This list represents a first attempt to determine the scope and nature of research on Canada's urban past. It will probably be revised and enlarged annually. Information on the extent to which Canadian urban history is being taught at the university and college level hopefully will be available in this Review next year, based on the response to a questionnaire included in the last issue of the Review. I suspect that teaching lags considerably behind research, at least as far as formal course designations are concerned, but perhaps the great expansion of research indicates that the urban dimension is becoming part of the general approach to teaching and understanding Canada's past.

ALCORN RS and IGARTUA JE Hist Dept UWO: impact of urbanization on non-urban places in Central Canada 1871-1911.

ARMSTRONG C Hist Dept York U: hist of electrical utilities in Canada's cities 1880-1930 (with HV Nelles).
